

## Home Page

### What it is about?

After the user entered his account, the home page will appear. It contains buttons that represent classrooms, faculty staff, exams, schedule, home, and settings.

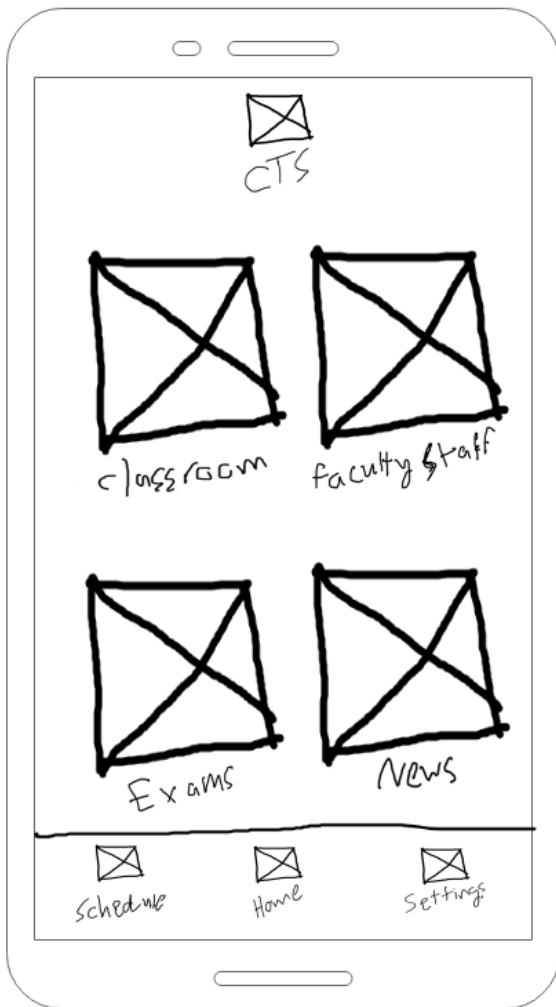

The classroom button opens a page that enables the user to search for classrooms. As a result of using the search bar, it'll appear information about the classroom that have been searched like, the class number, floor number, and direction button that leads the user to its location.

The faculty staff button will open a page that enables the user to search for faculty staff and their information. By using the search bar, it'll provide the result of faculty information that has been searched for.

The Exams button will open the page that can let the user see and search for exams. On the exams page, there is two buttons that can add and remove exams. Faculty staff user is the only user that can add and delete exams.

Schedule button opens a page that lets the user add, remove and see schedule courses. There are two buttons on this page.

The settings button on the home page opens the profile page. The page contains user information. The user can edit the information by clicking the edit button and he can log-out by clicking the log-out button.

### Action for users to take

Users in this page can decide what type of searching they want. Such as classroom, faculty staff and exam. Also, they can click on the news button to check for news.

## Classroom Search Page

### Design principle(s) applied

- Users don't read; they scan.
- Apply Gestalt principles in design; consider how the "form" (e.g., spacing and grouping) of your design affects the user experience.

### Design rationale

- Provide easy way to search for classes with clear design.
- Provide for users colorful bar so that attract them to the status of the classroom.

### Research finding applied to the design

One of the key findings from our user survey was that users wants to be able to view the status of the classroom.
